Final Project

Your Final Project assignment will be created completely by you, and I will act as the facilitator to help you achieve what you want to create.

I will assess you based on your ability to problem solve, well-structured and thought out code, and the general aesthetics of your design. In order to do well in all of these, I suggest selecting a topic you would enjoy making something for or something you designed in class previously.

Step 1. Come up with a concept or idea

Try to make something simple enough that you can achieve it, but challenging enough for you to develop your skills. Here are some examples:

- Develop a clickable version of the app you designed in class previously
- Make your mini-magazine into a clickable web magazine
- Make an interactive page (a simple web game or web experience)

Step 2. Design and plan it out for me to approve

Basic requirements:
- The final piece will have to involve HTML & CSS, and at least one other software learned (Illustrator, Photoshop, InDesign, etc)
- It must be an interactive piece involving your design ability
- It should not rely on or copy anyone else's concept / design / code directly

Step 3. Plan out how to make it and ask me along the way when you're stuck.

Step 4. On April 19, you will need to have your work finalized.

Step 5. By April 26, you will need to make your code live (online) with a URL.

Final: May 3 You will make a short (3 – 5 minute) presentation on your idea and your work for the whole class.

Ask as many questions as you like, but use online sources heavily.

Thanks!
